

## **Accommodation Profile Descriptions:**

*If a student's profile does not best meet his/her needs in the practice area, it may be edited later by the teacher.*

### **Content Nav: (Content Navigation)**

**In Page:** All information will appear in one text box and the user will just have to scroll down to view the full text. This will be the default setting and appropriate for most students, especially WordSmith users.

**Window:** (Appropriate for JAWS screenreader users) Displays supplementary reading and image alternative text in a pop-up window.

**Dual Frame:** (Optional view for Read and Write Gold, eReader or Kurzweil 3000 textreader users) Displays supplementary reading and image alternative text in the same page. Readings are displayed in a top frame of the window.

Appropriate for students who struggle with navigation between a reading passage and questions related to passage. This option will not work for WordSmith/BrowseAloud.

### **Online Open Response:**

**Yes:** Displays an edit box so the student or an adult scribe can answer Open-Response questions online.

**No:** Instructs the student or adult scribe to write Open-Response answers in the student response booklet.

### **Image Text:**

**No:** Will not display a link on the page for opening the text for the image. Appropriate for sighted students who do not need cueing or prompting.

**Yes:** Displays a link on the page that opens the descriptive text for that image (e.g., pictures, graphs, diagrams, etc.) If Content Nav option is "Window", text appears in a popup window. This option is appropriate for students with visual impairments or students who require cueing/prompting, as noted in their IEP.

### **In Page Nav: (In page navigation)**

**No:** No page navigation is provided – (sighted) student uses web browser's scroll bars.

**Yes:** Displays navigation for the exam's current page corresponding with exam question. This is suitable for students (VI) who use the tab key to navigate a screen, and wish to move to sections of the page quickly. Links go to question, answers and question navigation areas. Each area is highlighted when user selects link.
